

Telecom Distribution Solutions

Break Out Box

Description

The Telecom Distribution Module provides a structured and concise way for phone line management throughout the house. Each telecom module supports up to four telephone lines via either RJ45 socket or 110 punch-down IDC to distribute telephone service at each location. Modules with RJ31x security interface enables line seizure and auto dial out capability to support security systems. The bridged telecom module with built-in DSL phone filter minimizes voice band interference from high-speed data transmission to ensure communication quality.

Applications

- Residential Telephone Line Distribution
- Home Security Alarm Systems
- Structured Home Wiring Systems
- DSL Telephone Networks

Telecom Distribution Solutions

Break Out Box
